

AMENDED IN ASSEMBLY APRIL 14, 2010

AMENDED IN ASSEMBLY APRIL 7, 2010

CALIFORNIA LEGISLATURE—2009–10 REGULAR SESSION

## **ASSEMBLY BILL**

**No. 2514**

---

**Introduced by Assembly Member Skinner**

February 19, 2010

---

An act to amend Section 25302 of the Public Resources Code, and to amend Sections ~~454.3, 9615, 9615~~ and 9620 of, and to add Chapter 7.7 (commencing with Section 2835) to Part 2 of Division 1 of, the Public Utilities Code, relating to energy.

### LEGISLATIVE COUNSEL'S DIGEST

AB 2514, as amended, Skinner. Energy storage systems.

Under existing law, the Public Utilities Commission (CPUC) has regulatory authority over public utilities, including electrical corporations, as defined. The existing Public Utilities Act requires the CPUC to review and adopt a procurement plan for each electrical corporation in accordance with specified elements, incentive mechanisms, and objectives. The existing California Renewables Portfolio Standard Program (RPS program) requires the CPUC to implement annual procurement targets for the procurement of eligible renewable energy resources, as defined, for all retail sellers, including electrical corporations, community choice aggregators, and electric service providers, but not including local publicly owned electric utilities, to achieve the targets and goals of the program.

The existing Warren-Alquist State Energy Resources Conservation and Development Act establishes the State Energy Resources Conservation and Development Commission (Energy Commission)

and requires it to undertake a continuing assessment of trends in the consumption of electricity and other forms of energy and to analyze the social, economic, and environmental consequences of those trends and to collect from electric utilities, gas utilities, and fuel producers and wholesalers and other sources, forecasts of future supplies and consumption of all forms of energy. Existing law requires the Energy Commission, beginning November 1, 2003, and every 2 years thereafter, to adopt an integrated energy policy report which includes an assessment and forecast of system reliability and the need for resource additions, efficiency, and conservation.

Existing law requires that each local publicly owned electric utility serving end-use customers to prudently plan for and procure resources that are adequate to meet its planning reserve margin and peak demand and operating reserves, sufficient to provide reliable electric service to its customers. That law additionally requires the utility, upon request, to provide the Energy Commission with any information the Energy Commission determines is necessary to evaluate the progress made by the local publicly owned electric utility in meeting those planning requirements, and requires the Energy Commission to report the progress made by each utility to the Legislature, to be included in the integrated energy policy reports. Under existing law the governing body of a local publicly owned electric utility is responsible for implementing and enforcing a renewables portfolio standard for the utility that recognizes the intent of the Legislature to encourage renewable resources, while taking into consideration the effect of the standard on rates, reliability, and financial resources and the goal of environmental improvement.

~~This bill would require each electrical corporation and local publicly owned electric utility, commencing January 1, 2014, to procure, as defined, new energy storage systems, as defined, with a capacity of not less than specified percentages of the utility's average peak electrical demand (energy storage portfolio) the CPUC, by April 1, 2011, to open a proceeding to establish procurement targets for each electrical corporation for viable and cost-effective energy storage systems and, by January 1, 2013, to adopt an appropriate energy storage system procurement target to be achieved by each electrical corporation by January 1, 2015, and a 2nd target to be achieved by January 1, 2020. The bill would require the governing board of a local publicly owned electric utility, by April 1, 2011, to open a proceeding to establish procurement targets for the utility for viable and cost-effective energy storage systems and, by January 1, 2013, to adopt an appropriate energy~~

*storage system procurement target to be achieved by the utility by January 1, 2015, and a 2nd target to be achieved by January 1, 2020.* The bill would additionally require each ~~electrical corporation and local publicly owned electric utility~~, commencing January 1, 2012, to ~~implement~~ *develop and submit to the Energy Commission a plan to implement* a 5-year program to employ distributed thermal, mechanical, or electrochemical energy storage systems to maximize shifting of electricity use for air-conditioning and refrigeration from peak demand periods to offpeak periods. The bill would require each electrical corporation and local publicly owned electric utility to ~~develop plans to meet the energy storage portfolio procurement requirements and to report certain information to the CPUC, for an electrical corporation, or to the Energy Commission, for a local publicly owned electric utility.~~ The bill would require the Energy Commission to include certain information relative to energy storage systems in the integrated energy policy report, commencing with the report to be made by November 1, 2011. The bill would make other technical, nonsubstantive revisions to existing law.

Under existing law, a violation of the Public Utilities Act or any order, decision, rule, direction, demand, or requirement of the CPUC is a crime.

Because certain of the provisions of this bill require action by the CPUC to implement, a violation of these provisions would impose a state-mandated local program by creating a new crime. Because certain of the bill's requirements are applicable to local publicly owned electric utilities, the bill would impose a state-mandated local program.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for specified reasons.

Vote: majority. Appropriation: no. Fiscal committee: yes.  
State-mandated local program: yes.

*The people of the State of California do enact as follows:*

- 1     *SECTION 1. The Legislature finds and declares all of the*
- 2     *following:*
- 3     *(a) Expanding the use of energy storage systems can assist*
- 4     *electrical corporations and local publicly owned electric utilities*

1 *in integrating increased amounts of renewable energy resources*  
2 *into the electrical transmission and distribution grid in a manner*  
3 *that minimizes emissions of greenhouse gases.*

4 *(b) Additional energy storage systems can optimize the use of*  
5 *the significant additional amounts of variable, intermittent, and*  
6 *offpeak electrical generation from wind and solar energy that will*  
7 *be entering the California power mix on an accelerated basis.*

8 *(c) Expanded use of energy storage systems can reduce costs*  
9 *to ratepayers by avoiding or deferring the need for new fossil*  
10 *fuel-powered peaking powerplants and avoiding or deferring*  
11 *distribution and transmission system upgrades and expansion of*  
12 *the grid.*

13 *(d) Expanded use of energy storage systems will reduce the use*  
14 *of electricity generated from fossil fuels to meet peak load*  
15 *requirements on days with high electricity demand and can avoid*  
16 *or reduce the use of electricity generated by high carbon-emitting*  
17 *electrical generating facilities during those high electricity demand*  
18 *periods. This will have substantial cobenefits from reduced*  
19 *emissions of criteria pollutants.*

20 *(e) Use of energy storage systems to provide the ancillary*  
21 *services otherwise provided by fossil-fueled generating facilities*  
22 *will reduce emissions of carbon dioxide and criteria pollutants.*

23 *(f) There are significant barriers to obtaining the benefits of*  
24 *energy storage systems, including inadequate evaluation of the*  
25 *use of energy storage to integrate renewable energy resources*  
26 *into the transmission and distribution grid through long-term*  
27 *electricity resource planning, lack of recognition of technological*  
28 *and marketplace advancements, and inadequate statutory and*  
29 *regulatory support.*

30 **SECTION 1.**

31 **SEC. 2.** Section 25302 of the Public Resources Code is  
32 amended to read:

33 25302. (a) Beginning November 1, 2003, and every two years  
34 thereafter, the commission shall adopt an integrated energy policy  
35 report. This integrated report shall contain an overview of major  
36 energy trends and issues facing the state, including, but not limited  
37 to, supply, demand, pricing, reliability, efficiency, and impacts on  
38 public health and safety, the economy, resources, and the  
39 environment. Energy markets and systems shall be grouped and  
40 assessed in three subsidiary volumes:

1 (1) Electricity and natural gas markets.

2 (2) Transportation fuels, technologies, and infrastructure.

3 (3) Public interest energy strategies.

4 (b) The commission shall compile the integrated energy policy  
5 report prepared pursuant to subdivision (a) by consolidating the  
6 analyses and findings of the subsidiary volumes in paragraphs (1),  
7 (2), and (3) of subdivision (a). The integrated energy policy report  
8 shall present policy recommendations based on an indepth and  
9 integrated analysis of the most current and pressing energy issues  
10 facing the state. The analyses supporting this integrated energy  
11 policy report shall explicitly address interfuel and intermarket  
12 effects to provide a more informed evaluation of potential tradeoffs  
13 when developing energy policy across different markets and  
14 systems.

15 (c) The integrated energy policy report shall include an  
16 assessment and forecast of system reliability and the need for  
17 resource additions, efficiency, and conservation that considers all  
18 aspects of energy industries and markets that are essential for the  
19 state economy, general welfare, public health and safety, energy  
20 diversity, and protection of the environment. This assessment shall  
21 be based on determinations made pursuant to this chapter.

22 (d) Beginning November 1, 2004, and every two years thereafter,  
23 the commission shall prepare an energy policy review to update  
24 analyses from the integrated energy policy report prepared pursuant  
25 to subdivisions (a), (b), and (c), or to raise energy issues that have  
26 emerged since the release of the integrated energy policy report.  
27 The commission may also periodically prepare and release  
28 technical analyses and assessments of energy issues and concerns  
29 to provide timely and relevant information for the Governor, the  
30 Legislature, market participants, and the public.

31 (e) (1) For purposes of this subdivision, “energy storage system”  
32 has the same meaning as in Section 2835.1 of the Public Utilities  
33 Code.

34 (2) Beginning November 1, 2011, and every two years thereafter,  
35 the integrated energy policy report, prepared by the commission  
36 pursuant to subdivision (a), shall do all of the following:

37 (A) Identify, evaluate, and recommend the best technologies  
38 and locations in the state for energy storage systems to achieve  
39 the purposes set forth in subdivision (a) of Section 2837.

1 (B) Evaluate the potential capacity and benefits of energy  
2 storage systems to the electrical transmission and distribution grid.

3 (C) Identify and recommend locations where the interconnection  
4 costs for energy storage systems located on the transmission and  
5 distribution grid would be minimized.

6 (f) In preparation of the report, the commission shall consult  
7 with the following entities: the Public Utilities Commission, the  
8 Office of Ratepayer Advocates, the State Air Resources Board,  
9 the Electricity Oversight Board, the Independent System Operator,  
10 the Department of Water Resources, the California Consumer  
11 Power and Conservation Financing Authority, the Department of  
12 Transportation, and the Department of Motor Vehicles, and any  
13 federal, state, and local agencies it deems necessary in preparation  
14 of the integrated energy policy report. To assure collaborative  
15 development of state energy policies, these agencies shall make a  
16 good faith effort to provide data, assessment, and proposed  
17 recommendations for review by the commission.

18 (g) The commission shall provide the report to the Public  
19 Utilities Commission, the Office of Ratepayer Advocates, the State  
20 Air Resources Board, the Electricity Oversight Board, the  
21 Independent System Operator, the Department of Water Resources,  
22 the California Consumer Power and Conservation Financing  
23 Authority, and the Department of Transportation. For the purpose  
24 of ensuring consistency in the underlying information that forms  
25 the foundation of energy policies and decisions affecting the state,  
26 those entities shall carry out their energy-related duties and  
27 responsibilities based upon the information and analyses contained  
28 in the report. If an entity listed in this subdivision objects to  
29 information contained in the report, and has a reasonable basis for  
30 that objection, the entity shall not be required to consider that  
31 information in carrying out its energy-related duties.

32 (h) The commission shall make the report accessible to state,  
33 local, and federal entities and to the general public.

34 SEC. 2. ~~Section 454.3 of the Public Utilities Code is amended~~  
35 ~~to read:~~

36 ~~454.3. The commission may, after a hearing, approve an~~  
37 ~~increase of from one-half of 1 percent to 1 percent in the rate of~~  
38 ~~return otherwise allowed an electrical corporation on its electric~~  
39 ~~plant for investment by the corporation in facilities meeting one~~  
40 ~~of the following requirements:~~

1 ~~(a) The facility is designed to generate electricity from a~~  
2 ~~renewable resource, including, but not limited to, solar energy,~~  
3 ~~geothermal steam, wind, and hydroelectric power at new or existing~~  
4 ~~dams; the facility is subject to Resources Agency review of its~~  
5 ~~environmental impacts and determination that the facility is~~  
6 ~~environmentally acceptable; its capital costs, when added to its~~  
7 ~~costs of operation and maintenance, result in a cost of electricity~~  
8 ~~generated over the useful life of the facility less than that of~~  
9 ~~electricity generated by existing facilities utilizing nuclear power~~  
10 ~~or fossil fuel; and the facility is used and useful.~~

11 ~~(b) The facility is capable of meeting the then applicable~~  
12 ~~environmental pollution standards; its capital costs, when added~~  
13 ~~to its costs of operation and maintenance, result in a cost of~~  
14 ~~electricity generated over the useful life of the facility less than~~  
15 ~~that of electricity generated by existing facilities utilizing nuclear~~  
16 ~~power or fossil fuel; and the facility is used and useful.~~

17 ~~(c) The facility is experimental and is, in the determination of~~  
18 ~~the commission, reasonably designed to improve or perfect~~  
19 ~~technology for the generation of electricity from renewable~~  
20 ~~resources or to more efficiently utilize other resources in a manner~~  
21 ~~which will decrease environmental pollution from and lower the~~  
22 ~~costs of the electricity generated.~~

23 ~~(d) The facility is an “energy storage system,” as defined in~~  
24 ~~Section 2835.1, and serves at least one of the purposes identified~~  
25 ~~in subdivision (a) of Section 2837.~~

26 SEC. 3. Chapter 7.7 (commencing with Section 2835) is added  
27 to Part 2 of Division 1 of the Public Utilities Code, to read:

28  
29 CHAPTER 7.7. ENERGY STORAGE SYSTEMS  
30

31 2835. The Legislature finds and declares all of the following:

32 ~~(a) Expanding the use of energy storage systems can assist~~  
33 ~~electrical corporations and local publicly owned electric utilities~~  
34 ~~in integrating increased amounts of renewable energy resources~~  
35 ~~into the electrical transmission and distribution grid in a manner~~  
36 ~~that minimizes emissions of greenhouse gases.~~

37 ~~(b) Additional energy storage systems can optimize use of the~~  
38 ~~significant additional amounts of variable, intermittent, and offpeak~~  
39 ~~electrical generation from wind and solar energy that will be~~  
40 ~~entering the California power mix on an accelerated basis.~~

~~(e) Expanded use of energy storage systems can reduce costs to ratepayers by avoiding or deferring the need for new fossil-fuel powered peaking powerplants and avoiding or deferring distribution and transmission system upgrades and expansion of the grid.~~

~~(d) Expanded use of energy storage systems will reduce the use of electricity generated from fossil-fuels to meet peak-load requirements on days with high electricity demand and can avoid or reduce the use of electricity generated by high carbon-emitting electrical-generating facilities during those high electricity demand periods. This will have substantial cobenefits from reduced emissions of criteria pollutants.~~

~~(e) Use of energy storage systems to provide the ancillary services otherwise provided by fossil-fueled generating facilities will reduce emissions of carbon dioxide and criteria pollutants.~~

~~(f) There are significant barriers to obtaining the benefits of energy storage systems including inadequate evaluation of the use of energy storage to integrate renewable energy resources into the transmission and distribution grid through long-term electricity resource planning, lack of recognition of technological and marketplace advancements, and inadequate statutory and regulatory support.~~

~~2835.1.~~

2835. For purposes of this chapter, the following terms have the following meanings:

~~(a) “Energy storage portfolio” means those requirements for an electrical corporation or local publicly owned electric utility to procure new energy storage systems established pursuant to Section 2836.~~

~~(b)~~

(a) (1) “Energy storage system” means commercially available technology that is capable of absorbing energy, storing it for a period of time, and thereafter dispatching the energy. An “energy storage system” may have any of the characteristics in paragraph (2), shall accomplish one of the purposes in paragraph (3), and shall meet at least one of the characteristics in paragraph (4).

(2) An “energy storage system” may have any of the following characteristics:

(A) Be either centralized or distributed.

(B) Be either owned by an electrical corporation or local publicly owned electric utility, a customer of an electrical corporation or local publicly owned electric utility, or a third party, or is jointly owned by two or more of the above.

(3) An “energy storage system” shall *be cost effective and* either reduce emissions of greenhouse gases, reduce demand for peak electrical generation, or improve the reliable operation of the electrical transmission or distribution grid.

(4) An “energy storage system” shall do one or more of the following:

(A) Use mechanical, chemical, or thermal processes to store energy that was generated at offpeak times for use at a later time without substantial reliance on fossil fuels.

(B) Store thermal energy for direct use for heating or cooling at a later time in a manner that avoids the need to use electricity at that later time.

(C) Use mechanical, chemical, or thermal processes to store energy generated from renewable resources for use at a later time without substantial reliance on fossil fuels.

(D) Use mechanical, chemical, or thermal processes to store energy generated from mechanical processes that would otherwise be wasted for delivery at a later time without substantial reliance on fossil fuels.

~~(e)~~

~~(b)~~ “New” means, in reference to an energy storage system, a system that is installed and first becomes operational after January 1, 2010.

~~(d)~~

~~(c)~~ “Offpeak” means, in reference to electrical demand, a period that is not within a peak demand period.

~~(e)~~

~~(d)~~ “Peak demand period” means a period of high daily, weekly, or seasonal demand for electricity. For purposes of this chapter, the peak demand period for an electrical corporation shall be determined, or approved, by the commission and shall be determined, or approved, for a local publicly owned electric utility, by its governing body.

~~(f)~~

~~(e)~~ “Procure” and “procurement” means, in reference to the procurement of an energy storage system, to acquire by ownership

1 or by a contractual right to use the energy from, or the capacity  
2 of, including ancillary services, an energy storage system owned  
3 by a customer or third party.

4 ~~2836. Each electrical corporation and local publicly owned~~  
5 ~~electric utility shall procure new energy storage systems with a~~  
6 ~~capacity of not less than the following percentages of electrical~~  
7 ~~demand:~~

8 ~~(a) (1) On or before January 1, 2014, and continuing through~~  
9 ~~December 31, 2019, the utility shall procure new energy storage~~  
10 ~~systems with a capacity of not less than 2.25 percent of the utility's~~  
11 ~~average peak electrical demand over the previous five years.~~

12 ~~(2) The energy storage system procurement requirement shall~~  
13 ~~be calculated on a calendar year basis. For example, for the~~  
14 ~~calendar year January 1, 2014, to December 31, 2014, the energy~~  
15 ~~storage portfolio procurement requirement shall be calculated~~  
16 ~~based upon the five year period commencing January 1, 2009, and~~  
17 ~~ending December 31, 2013. For the calendar year January 1, 2015,~~  
18 ~~to December 31, 2015, the energy storage portfolio procurement~~  
19 ~~requirement shall be calculated based upon the five-year period~~  
20 ~~commencing January 1, 2010, and ending December 31, 2014.~~

21 ~~(b) (1) On or before January 1, 2020, and continuing through~~  
22 ~~December 31, 2024, the utility shall procure new energy storage~~  
23 ~~systems with a capacity of not less than 5 percent of the utility's~~  
24 ~~average peak electrical demand over the previous five years.~~

25 ~~(2) The energy storage system procurement requirement shall~~  
26 ~~be calculated on a calendar year basis.~~

27 ~~2836.1. Commencing January 1, 2012, each electrical~~  
28 ~~corporation and local publicly owned electric utility shall~~  
29 ~~implement a five-year program to employ distributed thermal,~~  
30 ~~mechanical, or electrochemical energy storage systems to maximize~~  
31 ~~shifting of electricity use for air-conditioning and refrigeration~~  
32 ~~from peak demand periods to offpeak periods. The program shall,~~  
33 ~~at a minimum, implement the actions identified in the plans~~  
34 ~~required, for an electrical corporation, by Section 2837.2, and for~~  
35 ~~a local publicly owned electric utility, by paragraph (2) of~~  
36 ~~subdivision (f) of Section 9615. Distributed energy storage systems~~  
37 ~~employed pursuant to this section may be used to meet the~~  
38 ~~procurement requirements of Section 2836 if they are otherwise~~  
39 ~~eligible.~~

1     ~~2836.2. (a) The commission shall develop a program to use~~  
2 ~~energy storage systems to achieve all feasible, cost-effective~~  
3 ~~air-conditioning and refrigeration load shifting in new and existing~~  
4 ~~facilities. The purposes of the program shall include reducing~~  
5 ~~electricity demand during peak demand periods and reducing~~  
6 ~~emissions of greenhouse gases, oxides of nitrogen, and particulate~~  
7 ~~matter.~~

8     ~~(b) Each electrical corporation shall implement the program by~~  
9 ~~January 1, 2016.~~

10   ~~(c) Energy storage systems employed pursuant to this section~~  
11 ~~may be used to meet the procurement requirements of Section~~  
12 ~~2836 if they are otherwise eligible.~~

13     2836. (a) (1) *On or before April 1, 2011, the commission shall*  
14 *open a proceeding to establish procurement targets for each*  
15 *electrical corporation for viable and cost-effective energy storage*  
16 *systems.*

17     (2) *On or before January 1, 2013, the commission shall adopt*  
18 *appropriate energy storage system procurement targets to be*  
19 *achieved by each electrical corporation by January 1, 2015, and*  
20 *a second target to be achieved by January 1, 2020.*

21     (3) *The commission shall reevaluate the determinations made*  
22 *pursuant to this subdivision not less than once every three years.*

23     (b) (1) *On or before April 1, 2011, the governing board of each*  
24 *local publicly owned electric utility shall initiate a process to*  
25 *establish procurement targets for the utility for viable and*  
26 *cost-effective energy storage systems.*

27     (2) *On or before January 1, 2013, the governing board shall*  
28 *adopt appropriate energy storage system procurement targets to*  
29 *be achieved by the utility by January 1, 2015, and a second target*  
30 *to be achieved by January 1, 2020.*

31     (3) *The governing board shall reevaluate the determinations*  
32 *made pursuant to this subdivision not less than once every three*  
33 *years.*

34     (4) *A local publicly owned electric utility shall report to the*  
35 *Energy Commission regarding the energy storage system*  
36 *procurement targets adopted by the governing board pursuant to*  
37 *paragraph (2), and report any modifications made to those targets*  
38 *as a result of a reevaluation undertaken pursuant to paragraph*  
39 *(3).*

1     2836.2. *In adopting and reevaluating appropriate energy*  
2 *storage system procurement targets pursuant to subdivision (a) of*  
3 *Section 2836, the commission shall do all of the following:*

4     (a) *Consider existing results of testing and trial pilot projects*  
5 *from existing energy storage facilities.*

6     (b) *Consider available information from the California*  
7 *Independent System Operator derived from California Independent*  
8 *System Operator testing and evaluation procedures.*

9     (c) *Consider the integration of energy storage technologies with*  
10 *other programs, including energy efficiency or other means of*  
11 *reducing electrical demand that will result in the most efficient*  
12 *use of generation resources and cost-effective energy efficient grid*  
13 *integration and management.*

14     (d) *Ensure that the energy storage system procurement targets*  
15 *that are established are technologically viable and cost effective.*

16     ~~2836.3.~~

17     2836.4. (a) An energy storage system shall be used to meet  
18 the resource adequacy requirements established for an electrical  
19 corporation pursuant to Section 380 if it meets applicable standards.

20     (b) An energy storage system shall be used to meet the resource  
21 adequacy requirements established by a local publicly owned  
22 electric utility pursuant to Section 9620 if it meets applicable  
23 standards.

24     ~~2836.4.~~

25     2836.6. All procurement of energy storage systems by an  
26 electrical corporation or local publicly owned electric utility shall  
27 be cost effective. ~~In making this determination, the commission,~~  
28 ~~for an electrical corporation, or the governing body, for a local~~  
29 ~~publicly owned electric utility, shall value all lifetime avoided~~  
30 ~~costs of the energy storage system, including avoided~~  
31 ~~environmental costs, and where applicable, shall consider and~~  
32 ~~value all of the purposes served by an energy storage system,~~  
33 ~~including those listed in subdivision (a) of Section 2837.~~

34     ~~2836.5. The commission may extend, in one-year increments,~~  
35 ~~the time for compliance with Section 2836 for a particular electrical~~  
36 ~~corporation. The commission shall only approve an extension of~~  
37 ~~the time for compliance with Section 2836 if it finds both of the~~  
38 ~~following:~~

39     ~~(a) The electrical corporation has fully explored all reasonable~~  
40 ~~methods to comply with its procurement requirements.~~

1     ~~(b) A one-year extension is warranted because compliance would~~  
2 ~~not be cost effective, after considering all lifetime avoided costs~~  
3 ~~of energy storage systems, including environmental costs, and all~~  
4 ~~of the purposes served by energy storage systems, including those~~  
5 ~~listed in subdivision (a) of Section 2837.~~

6     ~~2836.6. The governing body of a local publicly owned electric~~  
7 ~~utility may extend, in one-year increments, the time for the utility~~  
8 ~~to comply with Section 2836. The governing body shall only~~  
9 ~~approve an extension of the time for compliance with Section 2836~~  
10 ~~if it finds both of the following:~~

11     ~~(a) The utility has fully explored all reasonable methods to~~  
12 ~~comply with its procurement requirements.~~

13     ~~(b) A one-year extension is warranted because compliance would~~  
14 ~~not be cost effective, after considering all lifetime avoided costs~~  
15 ~~of energy storage systems, including environmental costs, and all~~  
16 ~~of the purposes served by energy storage systems, including those~~  
17 ~~listed in subdivision (f) of Section 9615.~~

18     2837. Each electrical corporation's renewable energy  
19 procurement plan, prepared and approved pursuant to Article 16  
20 (commencing with Section 399.11) of Chapter 2.3 of Part 1, shall  
21 do all of the following:

22     (a) Require the utility to procure new energy storage systems  
23 that are sufficient to allow the electrical corporation to meet the  
24 energy storage ~~portfolio procurement requirements of Section~~  
25 ~~2836. Each of the attributes that an energy storage system would~~  
26 ~~provide, including, but not limited to, the purposes listed below,~~  
27 ~~shall be considered and valued when determining if a proposed~~  
28 ~~energy storage system is cost effective. *system procurement targets*~~  
29 ~~*adopted pursuant to Section 2836.*~~ The plan shall address the  
30 acquisition and use of energy storage systems in order to achieve  
31 the following purposes:

32     (1) Integrate intermittent generation from eligible renewable  
33 energy resources into the reliable operation of the transmission  
34 and distribution grid.

35     (2) Allow intermittent generation from eligible renewable energy  
36 resources to operate at or near full capacity.

37     (3) Eliminate the need for new fossil-fuel powered peaking  
38 generation facilities by using stored electricity to meet peak  
39 demand.

1 (4) Reduce purchases of electricity generation sources with  
2 higher emissions of greenhouse gases.

3 (5) Eliminate or reduce transmission and distribution losses,  
4 including increased losses during periods of congestion on the  
5 grid.

6 (6) Reduce the demand for electricity during peak periods and  
7 achieve permanent load-shifting by using thermal storage to meet  
8 air-conditioning needs.

9 (7) Avoid or defer investments in transmission and distribution  
10 system upgrades.

11 (8) Use energy storage systems to provide the ancillary services  
12 otherwise provided by fossil-fueled generating facilities.

13 (b) Consider and incorporate, where feasible, the Energy  
14 Commission's evaluation of energy storage locations, technologies,  
15 and benefits as identified in the most current systems, including  
16 locations where the interconnection costs for energy storage  
17 systems located on the transmission and distribution grid would  
18 be minimized, as identified in the Integrated Energy Policy Report  
19 prepared pursuant to Section 25302 of the Public Resources Code.

20 ~~(c) Provide for annual solicitations of bids for third-party energy~~  
21 ~~storage systems to meet the energy storage portfolio requirements~~  
22 ~~of Section 2836. All electrical corporation proposals for utility~~  
23 ~~ownership of energy storage systems shall be bid into the annual~~  
24 ~~solicitations in a manner that will allow for side-by-side~~  
25 ~~comparison of the costs and benefits of each bid.~~

26 ~~2837.2. Each electrical corporation's procurement plan,~~  
27 ~~prepared and approved pursuant to Section 454.5, shall include a~~  
28 ~~program, to be implemented over the following five years,~~  
29 ~~requiring the use of distributed thermal, mechanical, or~~  
30 ~~electrochemical energy storage systems to maximize shifting of~~  
31 ~~electricity use for air-conditioning and refrigeration from peak, to~~  
32 ~~offpeak periods. The purposes of the program shall include~~  
33 ~~reducing electricity demand during peak demand periods and~~  
34 ~~reducing emissions of greenhouse gases, oxides of nitrogen, and~~  
35 ~~particulate matter.~~

36 ~~2838. (a) By January 30, 2013, each electrical corporation~~  
37 ~~shall submit a report to the commission showing its progress toward~~  
38 ~~complying with the energy storage portfolio.~~

39 ~~(b) By January 20, 2014, each electrical corporation shall submit~~  
40 ~~a report to the commission demonstrating that it has complied with~~

1 the energy storage portfolio procurement requirements of  
2 subdivision (a) of Section 2836.

3 (e) By January 30, 2020, each electrical corporation shall submit  
4 a report to the commission demonstrating that it has complied with  
5 the energy storage portfolio procurement requirements of  
6 subdivision (b) of Section 2836.

7 (d) (1) Within 60 days of receipt of a report required by  
8 subdivision (b) or (c), the commission shall notify an electrical  
9 corporation if the report fails to demonstrate compliance with the  
10 energy storage portfolio procurement requirements.

11 (2) An electrical corporation receiving a notice of deficiency  
12 pursuant to paragraph (1), within 60 days of receiving the notice  
13 of deficiency, shall submit an energy storage portfolio compliance  
14 plan to the commission setting forth a program for compliance  
15 with the energy storage portfolio within six months of the required  
16 date of submittal. The compliance plan shall, at a minimum, set  
17 forth standard terms and conditions of contracts of not less than  
18 10 years' duration, for procurement of energy storage systems,  
19 and provide for solicitations to procure the energy storage systems  
20 necessary to achieve compliance with the energy storage portfolio.

21 (3) The electrical corporation that submitted a compliance plan  
22 shall comply with the applicable energy storage portfolio within  
23 six months from the required date of submittal and shall submit  
24 proof of compliance to the commission within 30 days of the  
25 expiration of the six-month period.

26 (e) The commission shall ensure that a copy of each report or  
27 plan required by subdivisions (a) to (d), inclusive, with any  
28 confidential information redacted, is available on the commission's  
29 Internet Web site.

30 (f) Each electrical corporation, by January 1, 2012, shall report  
31 to the commission the excess capacity levels, in kilowatts, of the  
32 substations and local distribution circuits on its electrical  
33 distribution system. The commission shall promptly make a  
34 summary of this information available to the public on its Internet  
35 Web site. Each electrical corporation shall at least annually, by  
36 January 1 of each year, update the information reported to the  
37 commission. The commission shall promptly make a summary of  
38 updated information available to the public on its Internet Web  
39 site.

1     ~~(g) If an electrical corporation fails to comply with the~~  
2     ~~requirements of this chapter or with a commission order~~  
3     ~~implementing this chapter, the commission shall exercise its~~  
4     ~~authority pursuant to Section 2113 to require compliance.~~

5     ~~2839. (a) By January 30, 2013, each local publicly owned~~  
6     ~~electric utility shall submit to the Energy Commission a report~~  
7     ~~showing its progress toward complying with the energy storage~~  
8     ~~portfolio.~~

9     ~~(b) By January 30, 2014, each local publicly owned electric~~  
10    ~~utility shall submit to the Energy Commission a report~~  
11    ~~demonstrating that it has complied with the energy storage portfolio~~  
12    ~~procurement requirements of subdivision (a) of Section 2836.~~

13    ~~(c) By January 30, 2020, each local publicly owned electric~~  
14    ~~utility shall submit to the Energy Commission, a report~~  
15    ~~demonstrating that it has complied with the energy storage portfolio~~  
16    ~~procurement requirements of subdivision (b) of Section 2836.~~

17    ~~(d) (1) Within 60 days of receipt of a report required by~~  
18    ~~subdivision (b) or (c), the Energy Commission shall notify a local~~  
19    ~~publicly owned electric utility if the report fails to demonstrate~~  
20    ~~compliance with the energy storage portfolio procurement~~  
21    ~~requirements.~~

22    ~~(2) A local publicly owned electric utility receiving a notice of~~  
23    ~~deficiency pursuant to paragraph (1), within 60 days of receiving~~  
24    ~~the notice of deficiency, shall submit an energy storage portfolio~~  
25    ~~compliance plan to the Energy Commission setting forth a program~~  
26    ~~for compliance with the energy storage portfolio within six months~~  
27    ~~of the required date of submittal. The compliance plan shall, at a~~  
28    ~~minimum, set forth standard terms and conditions of contracts of~~  
29    ~~not less than 10 years' duration, for procurement of energy storage~~  
30    ~~systems, and provide for solicitations to procure the energy storage~~  
31    ~~systems necessary to achieve compliance with the energy storage~~  
32    ~~portfolio.~~

33    ~~(3) The local publicly owned electric utility that submitted a~~  
34    ~~compliance plan shall comply with the applicable energy storage~~  
35    ~~portfolio within six months from the required date of submittal~~  
36    ~~and shall submit proof of compliance to the Energy Commission~~  
37    ~~within 30 days of the expiration of the six-month period.~~

38    ~~(e) The Energy Commission shall ensure that a copy of each~~  
39    ~~report or plan required by subdivisions (a) to (d), inclusive, with~~  
40    ~~any confidential information redacted, is available on the Energy~~

Commission's Internet Web site, or upon an Internet Web site maintained by the local publicly owned utility that can be accessed from the Energy Commission's Internet Web site.

(f) On or before July 1, 2011, the Energy Commission shall adopt regulations specifying procedures for enforcement of this chapter. The regulations shall include a public process under which the Energy Commission may issue a notice of violation and correction against a local publicly owned electric utility for failure to comply with this chapter, and for referral of violations to the State Air Resources Board for penalties pursuant to subdivision (g).

(g) (1) Upon a determination by the Energy Commission that a local publicly owned electric utility has failed to comply with this chapter, the Energy Commission shall refer the failure to comply to the State Air Resources Board which may impose penalties to enforce this article consistent with Part 6 (commencing with Section 38580) of Division 25.5 of the Health and Safety Code.

(2) For the purpose of this subdivision, implementation of this chapter by a local publicly owned electric utility is an emissions reduction measure pursuant to Section 38580 of the Health and Safety Code.

(3) If the State Air Resources Board has imposed a penalty upon a local publicly owned electric utility for the utility's failure to comply with this chapter, the State Air Resources Board shall not impose an additional penalty for the same infraction, or the same failure to comply, with any requirement imposed upon the utility pursuant to the California Global Warming Solutions Act of 2006 (Division 25.5 (commencing with Section 38500) of the Health and Safety Code).

(h) The commission has no authority or jurisdiction to enforce any of the requirements of this chapter on a local publicly owned electric utility.

2838. (a) (1) By January 1, 2015, each electrical corporation shall submit a report to the commission demonstrating that it has complied with the energy storage system procurement targets adopted by the commission pursuant to subdivision (a) of Section 2836.

(2) By January 1, 2020, each electrical corporation shall submit a report to the commission demonstrating that it has complied

1 *with the energy storage system procurement targets adopted by*  
2 *the commission pursuant to subdivision (a) of Section 2836.*

3 *(b) The commission shall ensure that a copy of each report*  
4 *required by subdivision (a), with any confidential information*  
5 *redacted, is available on the commission's Internet Web site.*

6 2839. *(a) (1) By January 1, 2015, a local publicly owned*  
7 *electric utility shall submit a report to the Energy Commission*  
8 *demonstrating that it has complied with the energy storage system*  
9 *procurement targets adopted by the governing board pursuant to*  
10 *subdivision (b) of Section 2836.*

11 *(2) By January 1, 2020, a local publicly owned electric utility*  
12 *shall submit a report to the Energy Commission demonstrating*  
13 *that it has complied with the energy storage system procurement*  
14 *targets adopted by the governing board pursuant to subdivision*  
15 *(b) of Section 2836.*

16 *(b) (1) Within 60 days of receipt of a report required by*  
17 *subdivision (a), the Energy Commission shall notify a local publicly*  
18 *owned electric utility if the report fails to demonstrate compliance*  
19 *with the energy storage system procurement target requirements.*

20 *(2) Within 60 days of receiving a notice of deficiency pursuant*  
21 *to paragraph (1), a local publicly owned electric utility shall submit*  
22 *an energy storage system procurement compliance plan to the*  
23 *Energy Commission setting forth a program for compliance with*  
24 *the energy storage system procurement targets within six months*  
25 *of the required date for submittal of the compliance plan.*

26 *(3) The local publicly owned electric utility that submitted an*  
27 *energy storage system procurement compliance plan shall comply*  
28 *with the applicable energy storage system procurement targets*  
29 *within six months from the required date for submittal of the*  
30 *compliance plan and shall submit proof of compliance to the*  
31 *Energy Commission within 30 days of the expiration of the*  
32 *six-month period.*

33 *(c) The Energy Commission shall ensure that a copy of each*  
34 *report or plan required by subdivisions (a) and (b), with any*  
35 *confidential information redacted, is available on the Energy*  
36 *Commission's Internet Web site, or on an Internet Web site*  
37 *maintained by the local publicly owned electric utility that can be*  
38 *accessed from the Energy Commission's Internet Web site.*

1     (d) *On or before July 1, 2011, the Energy Commission shall*  
2     *adopt regulations specifying procedures to enable local publicly*  
3     *owned electric utilities to comply with this chapter.*

4     (e) *The commission does not have authority or jurisdiction to*  
5     *enforce any of the requirements of this chapter against a local*  
6     *publicly owned electric utility.*

7     SEC. 4. Section 9615 of the Public Utilities Code is amended  
8     to read:

9     9615. (a) Each local publicly owned electric utility, in  
10    procuring energy to serve the load of its retail end-use customers,  
11    shall first acquire all available energy efficiency and demand  
12    reduction resources that are cost effective, reliable, and feasible.

13    (b) On or before June 1, 2007, and by June 1 of every third year  
14    thereafter, each local publicly owned electric utility shall identify  
15    all potentially achievable cost-effective electricity efficiency  
16    savings and shall establish annual targets for energy efficiency  
17    savings and demand reduction for the next 10-year period. A local  
18    publicly owned electric utility's determination of potentially  
19    achievable cost-effective electricity efficiency savings shall be  
20    made without regard to previous minimum investments undertaken  
21    pursuant to Section 385. A local publicly owned electric utility  
22    shall treat investments made to achieve energy efficiency savings  
23    and demand reduction targets as procurement investments.

24    (c) Within 60 days of adopting annual targets pursuant to  
25    subdivision (b), each local publicly owned electric utility shall  
26    report those targets to the Energy Commission, and the basis for  
27    establishing those targets.

28    (d) Each local publicly owned electric utility shall report  
29    annually to its customers and to the Energy Commission. The  
30    report shall contain, but is not limited to, both of the following:

31    (1) Its investments in energy efficiency and demand reduction  
32    programs.

33    (2) A description of programs, expenditures, cost-effectiveness,  
34    and expected and actual energy efficiency savings and demand  
35    reduction results.

36    (e) Each local publicly owned electric utility shall also annually  
37    develop and submit to the Energy Commission a report containing  
38    all of the following:

39    (1) The sources of funding for its investments in energy  
40    efficiency and demand reduction program investments.

(2) The methodologies and input assumptions used to determine cost-effectiveness.

(3) The results of an independent evaluation that measures and verifies the energy efficiency savings and reduction in energy demand achieved by its energy efficiency and demand reduction programs.

~~(f) (1) Each local publicly owned electric utility, by January 1, 2011, shall develop and submit to the Energy Commission a plan to procure new energy storage systems that are sufficient to allow the utility to meet the energy portfolio requirements of subdivisions (a) and (b) of Section 2836. The plan shall address the acquisition and use of energy storage systems in order to achieve the following purposes:~~

~~(A) Integrate intermittent generation from eligible renewable energy resources into the reliable operation of the transmission and distribution grid.~~

~~(B) Allow intermittent generation from eligible renewable energy resources to operate at or near full capacity.~~

~~(C) Eliminate the need for new fossil-fuel powered peaking generation facilities by using stored electricity to meet peak demand.~~

~~(D) Reduce purchases of electricity generation sources with higher emissions of greenhouse gases.~~

~~(E) Eliminate or reduce transmission and distribution losses, including increased losses during periods of congestion on the grid.~~

~~(F) Reduce the demand for electricity during peak periods and achieve permanent load-shifting by using thermal storage to meet air-conditioning needs.~~

~~(G) Avoid or defer investments in transmission and distribution system upgrades.~~

~~(H) Use energy storage systems to provide the ancillary services otherwise provided by fossil-fueled generating facilities.~~

(2)

*(f) (1)* Each local publicly owned electric utility, by January 1, 2011, shall develop and submit to the Energy Commission ~~the~~ utility's a plan setting forth a program, to be implemented over the following five years, requiring the use of distributed thermal, mechanical, or electrochemical energy storage systems to maximize shifting of electricity use for air-conditioning and refrigeration

1 from peak demand periods to offpeak times pursuant to subdivision  
2 (e) of Section 2836. The purposes of the program shall include  
3 reducing electricity demand during peak demand periods and  
4 reducing emissions of greenhouse gases, oxides of nitrogen, and  
5 particulate matter.

6 ~~(3)~~

7 (2) In developing and implementing the ~~plans~~ *plan* required by  
8 this subdivision, each of the attributes that an energy storage system  
9 would provide, ~~including, but not limited to, those listed in~~  
10 ~~paragraphs (1) and (2)~~, shall be considered and valued when  
11 determining if a proposed energy storage system is cost effective.

12 ~~(4)~~

13 (3) Each local publicly owned electric utility, within one year  
14 of its issuance, shall consider and, where feasible, incorporate into  
15 the utility's ~~plans~~ *plan* required by this subdivision, the Energy  
16 Commission's evaluation of energy storage locations, technologies,  
17 and benefits as identified in the most current Integrated Energy  
18 Policy Report prepared pursuant to Section 25302 of the Public  
19 Resources Code.

20 (g) The Energy Commission shall include a summary of the  
21 information reported pursuant to subdivision (e) in the integrated  
22 energy policy report prepared pursuant to Chapter 4 (commencing  
23 with Section 25300) of Division 15 of the Public Resources Code.  
24 The Energy Commission shall also include, for each local publicly  
25 owned electric utility, a comparison of the local publicly owned  
26 electric utility's annual targets established in accordance with this  
27 section, and the local publicly owned electric utility's actual energy  
28 efficiency savings and demand reductions. If the Energy  
29 Commission determines that improvements can be made in either  
30 the level of a local publicly owned electric utility's annual targets  
31 to achieve all cost-effective, reliable, and feasible energy savings  
32 and demand reductions and to enable the local publicly owned  
33 electric utilities, in the aggregate, to achieve statewide targets  
34 established pursuant to Section 25310, or in meeting each local  
35 publicly owned electric utility's annual targets, the Energy  
36 Commission shall provide recommendations to the local publicly  
37 owned electric utility, the Legislature, and the Governor on those  
38 improvements.

39 SEC. 5. Section 9620 of the Public Utilities Code is amended  
40 to read:

1     9620. (a) Each local publicly owned electric utility serving  
2 end-use customers, shall prudently plan for and procure resources  
3 that are adequate to meet its planning reserve margin and peak  
4 demand and operating reserves, sufficient to provide reliable  
5 electric service to its customers. Customer generation located on  
6 the customer's site or providing electric service through  
7 arrangements authorized by Section 218, shall not be subject to  
8 these requirements if the customer generation, or the load it serves,  
9 meets one of the following criteria:

10     (1) It takes standby service from the local publicly owned  
11 electric utility on a rate schedule that provides for adequate backup  
12 planning and operating reserves for the standby customer class.

13     (2) It is not physically interconnected to the electric transmission  
14 or distribution grid, so that, if the customer generation fails, backup  
15 power is not supplied from the electricity grid.

16     (3) There is physical assurance that the load served by the  
17 customer generation will be curtailed concurrently and  
18 commensurately with an outage of the customer generation.

19     (b) Each local publicly owned electric utility serving end-use  
20 customers shall, at a minimum, meet the most recent minimum  
21 planning reserve and reliability criteria approved by the Board of  
22 Trustees of the Western Systems Coordinating Council or the  
23 Western Electricity Coordinating Council.

24     (c) Each local publicly owned electric utility shall prudently  
25 plan for and procure energy storage systems that are adequate to  
26 meet the requirements of Section 2836.

27     (d) A local publicly owned electric utility serving end-use  
28 customers shall, upon request, provide the Energy Commission  
29 with any information the Energy Commission determines is  
30 necessary to evaluate the progress made by the local publicly  
31 owned electric utility in meeting the requirements of this section.

32     (e) The Energy Commission shall report to the Legislature, to  
33 be included in each integrated energy policy report prepared  
34 pursuant to Section 25302 of the Public Resources Code, regarding  
35 the progress made by each local publicly owned electric utility  
36 serving end-use customers in meeting the requirements of this  
37 section.

38     SEC. 6. No reimbursement is required by this act pursuant to  
39 Section 6 of Article XIII B of the California Constitution because  
40 a local agency or school district has the authority to levy service

1 charges, fees, or assessments sufficient to pay for the program or  
2 level of service mandated by this act or because costs that may be  
3 incurred by a local agency or school district will be incurred  
4 because this act creates a new crime or infraction, eliminates a  
5 crime or infraction, or changes the penalty for a crime or infraction,  
6 within the meaning of Section 17556 of the Government Code, or  
7 changes the definition of a crime within the meaning of Section 6  
8 of Article XIII B of the California Constitution.

O
